A3 Screw Press

The most compact screw press available; ranges from 2-45 GPM

The A3 screw press is designed to dewater municipal and industrial sludge in the range of 0.6– 5% solids to achieve a product containing 18-25% solids.

The press utilizes an auger with a tapered shaft that rotates inside a stationary wedge wire drum screen. Sludge is pumped to the inlet end of the press. The auger transports and presses the sludge against the drum screen. A horizontal discharge cone automatically adjusts to maximize performance.

The press employs an automatic cleaning system consisting of water nozzles attached to a concentric ring that traverses the length of the press.

The nozzles, combined with brushes mounted on the auger flights, continuously clean the screen.

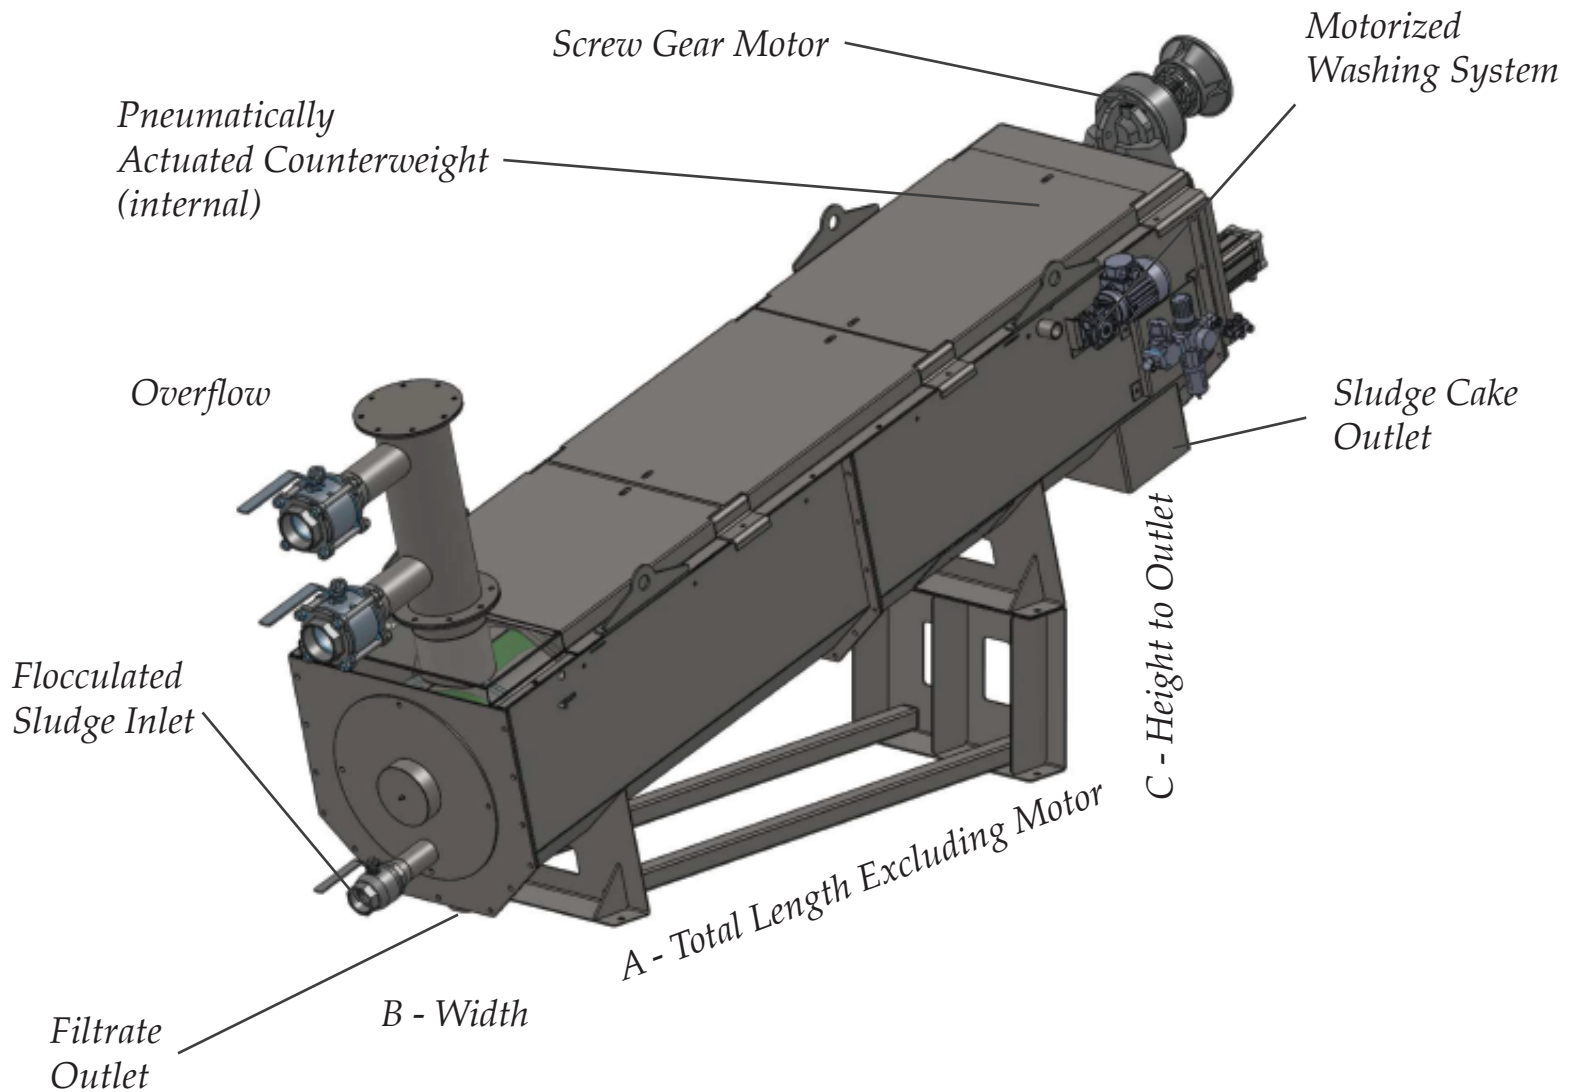

- Very small sizes available (2GPM)
- Custom skids w/ polymer & control panel as needed
- Fully automated operation
- Automatic washing system for reduced clogging
- Full enclosure reduces odor
- Removable covers for ease of maintenance
- 100% 304/316L stainless steel, passivated & pickled
- Low RPM (low wear)
- Low energy consumption
- Automatic discharge cone adjustment maximizes performance

Automated Cleaning System

Screw Press - Design Parameters

Model	Weight (lb)	Power (hp)	Max inlet flow (GPM)	Inlet solids %
SP-1	550	0.5	4	0.6-5
SP-2	875	0.8	8	0.6-5
SP-3	1,450	1.0	18	0.6-5
SP-4	2,250	1.5	33	0.6-5
SP-5	3,000	2.0	45	0.6-5

Model	A	B	C
SP-1	106	24	24
SP-2	118	32	28
SP-3	146	43	35
SP-4	177	52	41
SP-5	177	61	41
